01

*ROBOT RELATED
TERMS*

Robot as a Service (RAAS) is a completely innovative robot application model that began to emerge in the early 21st century with the development of machine vision and the proficiency of mechanical automation. It is especially suitable for businesses that lack manpower but want to increase efficiency. It is the most efficient business model for network applications. For more than 30 years, the robotics market has operated on the "classic" product design and sales business model. Under this sales strategy, new products are developed to meet market demand, then marketed and sold to target customers as valuable assets. As a customer, he owns the equipment, depreciates the equipment as a fixed asset during its service life, and is responsible for the maintenance and repair of the equipment during the service life of the equipment. At the end of product life, he is also responsible for disposing of obsolete equipment. In a Robotics-as-a-Service contract, the customer pays only for what is consumed, and all deployment, integration, support and equipment maintenance costs are covered in the service level contract. As with any subscription business model, customers will get better prices by entering into long-term contracts with RaaS providers.

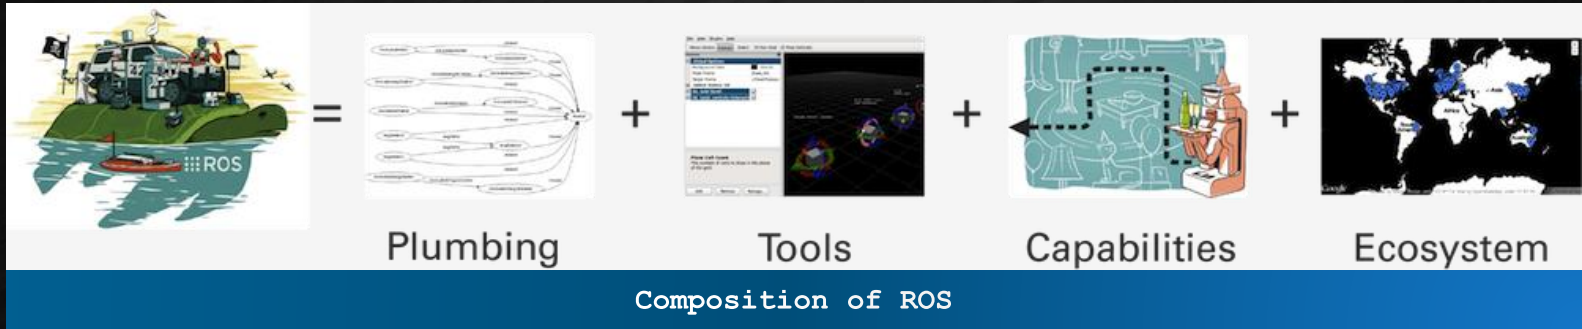

Capital Asset Sales Cycle Diagram

RaaS Based Sales Cycle Diagram

ROS (Robot Operating System) is a software framework for creating robot applications. Its main purpose is to provide functions that can be used to create robot applications, and the created applications can also be reused by other robots. ROS consists of a series of software tools, software libraries, and software packages that simplify robot software development.

Marble Floor

Robots can adapt to various types of ground environments, including ceramic tiles, wooden floors, hard carpets, marble floors, etc.

KEY POINTS FOR DEPLOYING ROBOTS POINT DEPLOYMENT

W3 Robot for Welcoming & Guiding

Origin: Facing directly to the entrance with a distance of around 2-3m

Charging point: As close as possible to the power outlet, with an open surrounding environment

KEY POINTS FOR DEPLOYING ROBOTS POINT DEPLOYMENT

Origin: Closed to reception

Charging point: As close as possible to the power outlet, with an open surrounding environment

Target point: The robot is facing to the room door with a distance of 50cm, facilitating interactive prompts

Waiting point: Located near the reception, in an open environment, with a robot interval of 1.5m

05

PRODUCT INTRODUCTION

ROBOT QUANTITY CALCULATION FOR ITEM DELIVERY PROCESS

Parameter		Values	Sub Result
Total Peak Hour Items Per Day	Total Number of Rooms	200	$200 \times 60\% \times 0.15 \times 6 \times 1.5 = 162$
	Attendance Rate	60%	
	Peak Hour Room Service Times Per Room Per Hour	0.15	
	Peak Hour Duration (h)	6	
	Number of Delivery Requirements during Peak Hour	1.5	
Time for One Delivery (min)	Average Usage Time of Elevator (Min)	2	$2 \times 2 + (4-1) \times (60+20) / (0.8 \times 60) = 9$
	Average Distance from Reception to Room (m)	60	
	Average Distance from Room to Room (m)	20	
	Average Number of Items Per Robot Delivery	4	
	Walking Speed (m/s) of Robots	0.8	

Calculation Result

Total Peak Hour Delivery: Total Peak Hour Items Per Day/Average Number of Items Per Robot Delivery= $162/4=40.5$
Total Time for Peak Hour Delivery: Total Peak Hour Delivery*Time for One Delivery= $40.5 \times 9=364.5$ min
Required Robot Quantity: Total Time for Peak Hour Delivery/Peak Hour Duration= $364.5 \text{ min} / (60 \text{ min} \times 6) = 1.0125$ units
 Round up to **2** Units

PRODUCT SPECIFICATION W3

KEENON W3 Hotel Robot

Maximum Speed	0.8 m/s	Localization Way	Laser
Minimum Passage Width	70 cm	Battery Life	9-12 h(actual results may vary)
Multi-robot Collaboration	Maximum 20 robots	Load Capacity	20kg (5kg per layer, with bottom layer capacity at 10kg)
Multi-point Delivery	Up to 4 rooms (Single journey)	No. of Cabins	2/3/4
Maximum Climbing Angle	Slope \leq 7°	Overpass Height	Max 15mm
Cabin Size	390*385*300mm/15.35*15.16*11.81inch (contain 66 bottles of 550ml water)		

- ✓ Welcome & Guiding in a Hotel
- ✓ Food & Item Delivery in a Hotel
- ✓ Large Delivery Space
- ✓ Automatically Taking Elevator
- ✓ Multiple Notification Ways
- ✓ Multi-point Delivery

PRODUCT SPECIFICATION C30

KEENON C30 Cleaning Robot

Cleaning Area	1500 m ² /Task (Under Full Charge)	Moving Speed	0.7 m/s
Cleaning Efficiency	540 m ² /h	Battery Life	3-4 Hours (Sweeping/Vacuuming Mode) 10 Hours (Dust-pushing Mode)
Maximum Cleaning Power	450 W	Charging Time	2-3 Hours
Maximum Vacuum Degree	11,000 Pa	Noise	60 dB
Maximum Cleaning Width	455 mm (Double Side Brush + Rolling Brush)	Maximum Slope Angle	≤ 7°
Dust Collection Ability	3.5 L/Bag	Carpet Cleaning Ability	10 mm

*CUSTOMER VALUE OF
HOTEL SOLUTION*

CUSTOMER VALUES QUANTITATIVE ANALYSIS

Average Saving: 88,572

Traditional Solution

Labor Plan Cost :

$$1 \times 18,000 + 5 \times 24,240 + 2 \times 20,400 = 180,000 \text{€}$$

Robot Solution

- The task of guiding the robot to the elevator is completely delegated to the robot and guide them to the elevator while the Hotel Greeter can focus on other services.
- The task of delivering food & item is completely delegated to 2 W3 robots while 2 Housekeeping Attendants take shift to put food or item into the W3 robot.
- The task of cleaning hotel's floor is completely handed over to C30 robot while the Hotel Cleaning Staff is responsible for changing dust bag or cleaning dust push

Average Installation Cost	123€/M
Average Leasing Cost	792€/M
Average Maintenance Cost	222€/M

Robot Solutions Combined with Labor Costs:

$$(1+2+1) \times (123+792+222) \times 12 + 1 \times 18,000 + 2 \times 24,240 + 1 \times 20,400 = 91,428 \text{€}$$

CUSTOMER VALUES QUALITATIVE ANALYSIS

- The tedious & repetitive work greatly reduces the efficiency of hotel staffs and affects the quality of service

- ✓ Improve Delivery Efficiency & Enhance Hotel Service Quality

- Hotel Staffs have high work intensity, high work pressure, and often complain or even resign, making it difficult for the hotel to rehire

- ✓ Reduce Labor Intensity, Enhance Employee Happiness, Make Employees More Stable and Professional

- The proportion of labor costs in hospitality operations is constantly increasing

- ✓ Save Labor Costs and Improve Profit Levels

- Hotel Staffs need to work in shifts and cannot be on standby at any time

- ✓ Robots are on standby for 7x24 hours, ready to respond to delivery & cleaning needs at any time

- The competition in the hospitality market is fierce, and uniform marketing makes it difficult to attract customers

- ✓ Attracting new customers with novelty, creating differentiation and marketing highlights in the fiercely competitive hospitality market
